

Xtra Hide

Product Description & Technical Composition

Description

Xtra Hide is a unique formulation that uses a synergy of moisturisers and delicate cleaners for keeping leather clean and supple.

Suitable for all leathers except suede and NuBuck.

Xtra Hide does not contain any solvents or abrasives, allowing it to clean leather safely without causing any damage, yet it is still capable of removing deeply ingrained dirt and grime.

Xtra Hide is an effective and powerful water-based cleaner making it ideal for light coloured leathers that show the dirt most, but can still be used on all colour of leather safely.

As a general rule we recommend cleaning your leather two or three times a year or as required depending on use.

Xtra Hide can be used on all different articles of leather, from furniture, car interiors to shoes and equestrian leathers.

Spray Xtra Hide into a XtraFibre cloth and squeeze so to create foam, then simply apply the foam in circular motions covering the entire area.

Remove any excess and then wipe clean with a damp cloth. Dry and allow to air dry completely.

For very dirty or heavily ingrained dirt or grime an Xtra Web agitator may be more suitable. Again use circular motions.

The use of our leather conditioning lotion is recommended to help protect the leather from fine scuff marks and general wear.

Features & Benefits

Excellent leather cleaner with conditioners.

Leaves leather soft and supple.

Fresh leather fragrance leaves a 'New' leather smell.
